INDUSTRIAL ACCIDENT STATISTICS, QUEENSLAND, SEPTEMBER QUARTER 1968

Government Insurance Office. All employers must insure their employees, but self-employed persons are not obliged to insure, and members of the Police Force and the Commonwealth Public Service are excluded. Details of industrial accidents given in this bulletin were extracted from claims finalised or becoming three years old during the September quarter 1968. They do not refer to accidents actually occurring within the period. By definition, accidents which caused employees to lose less than a full shift from work are excluded from the statistics.

An analysis of the September quarter 1968 claims showed that, of the 8,401 persons suffering work injuries, 7,718 (91.9 per cent) were males and 683 (8.1 per cent) were females. Of the persons injured, 8,167 (97.2 per cent) suffered injuries of a temporary nature, 215 (2.6 per cent) received some form of permanent disability, while 19 (0.2 per cent) were fatally injured. The 19 deaths were all males.

Work time lost through temporary disabilities amounted to 140,278 calendar days by males and 12,936 by females. Male employees lost an average of 18.7 days and 39.4 per cent of absences did not exceed one week's duration. The average number of days lost by female employees through temporary disabilities was 19.1, and 38.0 per cent of absences did not exceed one week's duration.

Of the male occupation groups listed in Table 2, Metal Tradesmen and Process Workers suffered most injuries (1,716, or 22.2 per cent). In the female grouping, more accidents (197, or 28.8 per cent of the total) happened to Service Industry and Recreation Workers than to any other group.

The most common agents precipitating these accidents were Hand Tools and Movable Equipment which led to 1,974, or 23.5 per cent, of work injuries. In the type of accident category, 3,570, or 46.3 per cent, of the injuries to male employees resulted from being Struck by Moving or Falling Objects, and 242 female employees, 35.4 per cent of the total number injured, received their injuries in the same manner.

Lacerations and open wounds (2,370 cases) and sprains and strains (2,250 cases) were the two most common injuries suffered. Internal injuries caused 9 of the 19 fatalities.

More detailed statistics are available quarterly and annually and may be had on request.

S. E. SOLOMON

DEPUTY COMMONWEALTH STATISTICIAN

AND GOVERNMENT STATISTICIAN
